

## New Satellite Positioning Antenna Alignment Tool

Lake Mary, FL USA – [New SPAA05-NEX Satellite Positioning Antenna Alignment Tool](#) Now Available From Test Equipment Connection

Test Equipment Connection Corporation announced today that it has entered into a Resale Agreement to market and sell the [SPAA05-NEX satellite positioning tool](#) for antenna alignment.

“Most network operators have made the SPAA05-NEX tool their standard and preferred antenna alignment method,” said President and COO Mike Novello. “The easy to use SPAA05-NEX was designed with the tower technician in mind. Using real time precision GPS technology to measure, the SPAA05-NEX can improve key performance indicators such as network accessibility and call retainability. This cost effective solution is more accurate than conventional antenna alignment methods such as a magnetic compass or triangulation.”

About the SPAA05-NEX:

European carriers have been using the SPAA05-NEX for years. Several USA carriers have already made the SPAA05-NEX their preferred antenna alignment solution. Network operators in India, Singapore and Japan have also implemented this solution, which features antenna mounting hardware and back-office software. Antenna optimization is achieved by improving the nominal antenna bearing (azimuth) in GSM, DCS and UMTS mobile cellular networks, with a heading accuracy of up to 0.5°.
